

DOCUMENT STRUCTURE

Build the skeleton every HTML page starts with.

WHAT TO KNOW

- HTML defines the meaning and structure of web content.
- The `<head>` contains machine-readable information.
- The `<body>` contains the content shown on the page.
- Keep elements correctly nested and indented.

index.html

HTML

```
1  <!DOCTYPE html>
2  <html lang="en">
3    <head>
4      <meta charset="UTF-8">
5      <meta name="viewport" content="width=device-width, initial-scale=1.0">
6      <title>My Website</title>
7    </head>
8    <body>
9      <h1>Hello, HTML!</h1>
10   </body>
11 </html>
```

main

UTF-8

HTML

VS Code style preview

KEY TERMS

DOCTYPE: Tells the browser to use the HTML standard.

Element: A complete HTML building block.

Attribute: Extra information written inside a start tag.

Nesting: Placing one HTML element inside another correctly.

VS CODE TIP Keep indentation clean and run the file in a browser to see the result.

PAGE LAYOUT & SEMANTIC TAGS

Give each major region of a page a meaningful HTML element.

WHAT TO KNOW

- Use `<header>`, `<nav>`, `<main>`, `<section>`, and `<footer>` for page regions.
- Use `<article>` for self-contained content.
- Use `<aside>` for related or secondary content.
- Use `<div>` when no more meaningful element fits.

layout.html

HTML

```
1  <body>
2    <header>
3      <h1>My Website</h1>
4    </header>
5    <nav>
6      <a href="#about">About</a>
7    </nav>
8    <main>
9      <section id="about">
10        <h2>About Me</h2>
11      </section>
12    </main>
13    <footer>Copyright 2026</footer>
14  </body>
```

main

KEY TERMS

Semantic: Meaningful structure expressed by an element name.

Navigation: Links used to move around a site or page.

Section: A thematic grouping of related content.

Container: An element used to hold other content.

VS CODE TIP Keep indentation clean and run the file in a browser to see the result.

TEXT, HEADINGS & FORMATTING

Create readable content and a clear hierarchy.

WHAT TO KNOW

- Use h1-h6 to show heading levels.
- Use for strong importance, not just visual bold.
- Use for stress emphasis.
-
 and <hr> are void elements; they do not need closing tags.

text.html

HTML

```
1 <h1>Main Heading</h1>
2 <h2>Section Heading</h2>
3 <p>Normal paragraph text.</p>
4 <strong>Important text</strong>
5 <em>Emphasized text</em>
6 <mark>Highlighted text</mark>
7 <br>
8 <hr>
```

main

UTF-8

HTML

VS Code style preview

KEY TERMS

- Hierarchy:** The order and levels of headings in content.
- Emphasis:** Stress or importance expressed in text.
- Void element:** An element with no closing tag or child content.
- Paragraph:** A block of normal text wrapped in <p>.

VS CODE TIP Keep indentation clean and run the file in a browser to see the result.

LINKS, IMAGES & MEDIA

Connect pages and embed images, audio, video, and external content.

WHAT TO KNOW

- Always give meaningful images an alt attribute.
- Use `<figure>` and `<figcaption>` when media needs a caption.
- `<track>` belongs inside `<video>` or `<audio>`.
- A descriptive iframe title improves accessibility.

media.html

HTML

```
1  <a href="https://example.com">Visit</a>
2  
3  <figure>
4      
5      <figcaption>Mountain view</figcaption>
6  </figure>
7  <video controls>
8      <source src="video.mp4" type="video/mp4">
9      <track src="captions.vtt" kind="subtitles"
10         srclang="en" label="English">
11 </video>
12 <iframe src="https://example.com" title="Example page"></iframe>
```

main

UTF-8

HTML

VS Code style preview

KEY TERMS

Hyperlink: A clickable connection to another resource.

Alternative text: Text describing an image for accessibility or when it cannot load.

Media: Audio, video, images, or other rich content.

Embed: Place another resource inside the current document.

VS CODE TIP Keep indentation clean and run the file in a browser to see the result.

LISTS & TABLES

Organize related items and structured data clearly.

WHAT TO KNOW

- Use `<ul>` for bullets and `<ol>` when order matters.
- Each list item belongs inside `<li>`.
- Use tables for tabular data, not for page layout.
- Table headers make data easier to understand.

data.html

HTML

```
1  <ul>
2    <li>HTML</li>
3    <li>CSS</li>
4  </ul>
5  <ol>
6    <li>Step 1</li>
7    <li>Step 2</li>
8  </ol>
9  <table>
10   <thead>
11     <tr><th scope="col">Name</th><th scope="col">Skill</th></tr>
12   </thead>
13   <tbody>
14     <tr><td>Charan</td><td>HTML</td></tr>
15   </tbody>
16 </table>
```

main

HTML

VS Code style preview

KEY TERMS

Unordered list: A list where item order is not important.

Ordered list: A list where sequence matters.

Table header: A cell that identifies a row or column.

Table body: The main group of data rows.

VS CODE TIP Keep indentation clean and run the file in a browser to see the result.

FORMS & USER INPUT

Collect information with labels, controls, and a submit button.

WHAT TO KNOW

- Connect each `<label>` to a control with matching `for` and `id` values.
- Give controls a name when their values need to be submitted.
- Choose input types that match the data users enter.
- Use a button with an appropriate type.

form.html

HTML

```
1  <form action="/submit" method="post">
2    <label for="name">Name</label>
3    <input type="text" id="name" name="name">
4    <label for="country">Country</label>
5    <select id="country" name="country">
6      <option value="india">India</option>
7    </select>
8    <label for="message">Message</label>
9    <textarea id="message" name="message"></textarea>
10   <button type="submit">Submit</button>
11 </form>
```

main

HTML

VS Code style preview

KEY TERMS

Form: A container that groups controls for user input and submission.

Control: An interactive form element such as input or select.

Validation: Checking whether submitted data follows expected rules.

Label: Text that describes a form control.

VS CODE TIP Keep indentation clean and run the file in a browser to see the result.

INTERACTIVE & ADVANCED

Useful elements to learn after the fundamentals are comfortable.

WHAT TO KNOW

- `<details>` pairs naturally with `<summary>` for expandable information.
- `<dialog>` creates a dialog element; JavaScript can control it.
- `<canvas>` is a drawing surface, not a replacement for semantic HTML.
- Learn these after the first six areas are comfortable.

advanced.html

HTML

```
1 <details>
2   <summary>More info</summary>
3   Extra information here.
4 </details>
5 <dialog open>Hello</dialog>
6 <canvas id="drawing" width="300" height="150"></canvas>
7 <iframe src="page.html" title="Embedded page"></iframe>
8 <object data="file.pdf" type="application/pdf"></object>
```

main

UTF-8

HTML

VS Code style preview

KEY TERMS

Interactive: Content that the user can open, close, control, or interact with.

Dialog: A modal or non-modal dialog surface.

Canvas: A drawing area controlled with JavaScript.

Embedded resource: External content placed inside the current page.

VS CODE TIP Keep indentation clean and run the file in a browser to see the result.

FINAL PRACTICE

Put the core ideas together in one small page you can run in VS Code.

WHAT TO KNOW

- Check that the document has one `<html>` root element.
- Keep `<head>` and `<body>` in the correct place.
- Make sure tags are correctly nested and closed when required.
- Then move on to CSS to style the page.

index.html

HTML

```
1  <!DOCTYPE html>
2  <html lang="en">
3    <head>
4      <meta charset="UTF-8">
5      <meta name="viewport" content="width=device-width, initial-scale=1.0">
6      <title>My Website</title>
7    </head>
8    <body>
9      <header><h1>My Website</h1></header>
10     <nav><a href="#about">About</a></nav>
11     <main>
12       <section id="about">
13         <h2>About Me</h2>
14         <p>I am learning <strong>HTML</strong>.</p>
15       </section>
16     </main>
17     <footer><small>&copy; 2026 My Website</small></footer>
18   </body>
19 </html>
```

main

UTF-8

HTML

VS Code style preview

KEY TERMS

Practice: Learning by writing and running code.

Structure: The organized arrangement of HTML elements.

Indentation: Spacing that makes nested code easy to read.

Run: Open the HTML file in a browser to see its result.

VS CODE TIP Keep indentation clean and run the file in a browser to see the result.
